Backend-focused Web Application Developer with over 4 years of experience building and maintaining enterprise-scale systems using PHP, MySQL, JavaScript, and Linux-based environments. Experienced in developing custom business applications, optimizing database performance, and delivering full-stack web features in production environments. Bilingual in English and Japanese with experience working in both Canadian and Japanese environments.

EXPERIENCE

Miraico Inc., Mie, Japan — Senior System Engineer (Remote From Canada)

March 2022 - PRESENT(On Maternity Leave)

- Developed and maintained enterprise web applications for universities and corporate clients using PHP, MySQL, JavaScript, HTML, and CSS
- Built and enhanced server-side backend functionality, improving system stability and overall performance
- Worked directly with clients and project managers to gather requirements and implement solutions that met business needs.
- Developed both frontend and backend features, improving user experience and system usability
- Maintained and updated production systems with high availability requirements
- Worked with WordPress websites, including content management, site configuration, theme customization, and client-requested enhancements.

Leafnet Inc., Tokyo, Japan — System Engineer

April 2021 – February 2022

- Led redevelopment of a large-scale web application within first two months of joining, delivering ahead of schedule
- Developed scalable full-stack web features using PHP, JavaScript, and MySQL
- Improved application performance through frontend optimization and database query improvements
- Conducted technical feasibility analysis and proposed system design improvements
- Supported ongoing system maintenance and feature enhancements

SKILLS
